

GASTEC

Chapter 3

Gastec Applied Detector Tube Systems for Gas and Vapour Analysis

Many short-term measurements of gases and vapours can be done with the Gastec Standard Detector Tube System, which consists of the Model GV-100 Gas Sampling Pump and Gastec standard detector tubes. At Gastec, we have extended the detector tube technology into a wide variety of applications for easy, accurate, and economical substance measurements. In this chapter, some of Gastec's applied detector tube systems for analysis of gases and vapours are introduced.
