

Comprehensive User Services

Gastec activities have not been limited to the production and marketing of its products. With its accumulated expertise on environment analysis, Gastec offers a wide variety of user services for the achievement of safe and hygienic environments. Among these are information service on measurements, consultation on special measurements and testing at the requests of customers.

Information service

Consultation service

Testing service

From basic and general information to advanced and specialized information on measurements is available.

Examples:

- Gas analysis methods
- Properties of gases (including dangerous and hazardous properties)
- Methods of calibration gas generation and adjustment

When measurements under special environments or of special substances are required, Gastec will propose appropriate methods for those measurements, advise considerations to be taken, or introduce other applications.

Examples :

- Qualitative analysis method of unknown gases
- Measurement methods of pollutants contained in special gases, water, or the ground
- Measurement methods of high concentration gases
- Measurement methods of hot or humid gases

Gastec will conduct tests on detector tubes for customers.

Examples :

- Interferences of coexisting gases
- Calibrations for special gases by using existing detector tubes
